

POLYCLONAL ANTIBODY

Anti-T7-tag pAb-Agarose

Code No. PM022-8

BACKGROUND: Epitope tagging is a powerful and versatile strategy for detecting and purifying proteins expressed by cloned genes. Short sequences encoding the epitope tag are cloned in-frame with target DNA to produce fusion proteins containing the epitope tag peptide. Due to their small size, epitope tags do not affect the tagged protein's biochemical properties. Anti-epitope tag antibodies can serve as universal purification or detection reagents for any tag-containing protein. The T7-tag antibody is directed against the 11 amino acid of gene 10 leader peptide expressed by many translation vectors (MASMTGGQQMG). Because the peptide is the natural amino terminal end of the T7 major capsid protein, the antibody also recognizes T7 bacteriophage. Anti-T7-tag antibodies are useful reagents to easily identify, detect, or purify T7-Tag fusion proteins from cell lysates.

SOURCE: This antibody was purified from rabbit serum using affinity column. The rabbit was immunized with carrier protein (*CP*) conjugated synthetic peptide, *CP*-MASMTGGQQMG.

FORMULATION: 340 μ g of anti-T7-tag polyclonal antibody covalently coupled to 200 μ L of agarose gel and provided as a 50% gel slurry suspended in PBS containing preservative (0.09% sodium azide) for a total volume of 400 μ L.

*Azide may react with copper or lead in plumbing system to form explosive metal azides. Therefore, always flush plenty of water when disposing materials containing azide into drain.

STORAGE: This antibody is stable for one year from the date of purchase when stored at 4°C.

REACTI	VITY:	This	antibody	recognizes	T7-tag
peptide	sequer	nce	(MASM]	(GGQQMG)	on
Immunoprecipitation.					

APPLICATIONS:

<u>Western blotting</u>; Not tested <u>Immunoprecipitation</u>; 20 µL of gel slurry <u>Immunohistochemistry</u>; Not tested <u>Immunocytochemistry</u>; Not tested Flow cytometry; Not tested

Detailed procedure is provided in the following **PROTOCOL**.

Quantity Gel: 200 µL

INTENDED USE

For Research Use Only. Not for use in diagnostic procedures.

REFERENCE:

1) Sekiya, T., et al., Nat. Commun. 2, 269 (2011)

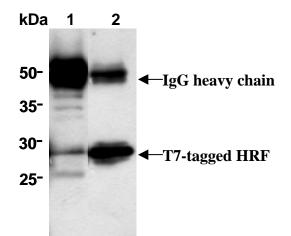

This antibody is used in this reference.

PROTOCOL:

Immunoprecipitation

- Wash the cells 3 times with PBS and suspend with 10 volume of cold Lysis buffer (50 mM Tris-HCl pH 7.5, 150 mM NaCl, 0.05% NP-40) containing appropriate protease inhibitors. Incubate it at 4 °C with rotating for 30 minutes, then sonicate briefly (up to 10 seconds).
- 2) Centrifuge the tube at 12,000 x g for 10 minutes at 4°C and transfer the supernatant to another tube.
- 3) Add agarose as suggest in the **APPLICATIONS** into 200 μ L of cell extract. Mix well and incubate with gentle agitation for 30-120 minutes at 4°C.
- 4) Wash the beads 3-5 times with the cold Lysis buffer (centrifuge the tube at 2,500 x g for 10 seconds).
- 5) Resuspend the agarose in 20 μL of Laemmli's sample buffer, boil for 3-5 minutes, and centrifuge for 5 minutes.
- 6) Load 10 μ L of the sample per lane in a 1-mm-thick SDS-polyacrylamide gel for electrophoresis.
- Blot the protein to a polyvinylidene difluoride (PVDF) membrane at 1 mA/cm² for 1 hour in a semi-dry transfer system (Transfer Buffer: 25 mM Tris, 190 mM glycine, 20% MeOH). See the manufacturer's manual for precise transfer procedure.
- 8) To reduce nonspecific binding, soak the membrane in 5% skimmed milk (in PBS, pH 7.2) for 1 hour at room temperature, or overnight at 4 °C.
- 9) Incubate the membrane with 1 μ g/mL of anti-T7-tag polyclonal antibody (MBL; code no. PM022) diluted with PBS, pH 7.2 containing 1% skimmed for 1 hour at room temperature. (The concentration of antibody to be used will depend on condition.)
- 10) Wash the membrane with PBS (5 minutes x 3 times).
- 11) Incubate the membrane with the 1:10,000 HRP-conjugated anti-rabbit IgG (MBL; code no. 458) diluted with 1% skimmed milk (in PBS, pH 7.2) for 1 hour at room temperature.
- 12) Wash the membrane with PBS (5 minutes x 3 times).
- 13) Wipe excess buffer on the membrane, then incubate it with appropriate chemiluminescence reagent for 1 minute. Remove extra reagent from the membrane by dabbing with paper towel, and seal it in plastic wrap.

MBL MEDICAL & BIOLOGICAL LABORATORIES CO., LTD. URL <u>https://ruo.mbl.co.jp</u> e-mail <u>support@mbl.co.jp</u>, TEL 052-238-1904 14) Expose to an X-ray film in a dark room for 3 minutes. Develop the film as usual. The condition for exposure and development may vary.

Immunoprecipitation of T7-Tag from BL21/pET28a-HRF E. coli lysate with rabbit IgG (1) and PM022-8 (2). After immunoprecipitated with the antibody, immunocomplex was resolved on SDS-PAGE and immunoblotted with PM022.
